THE OFFICE SERIES

Phonebooths *for Privacy*

QBISM_

A SHIFT IN
PRIVACY

Finding some quiet and calm in the midst of an open office environment can be critical to the overall productivity of a collaborative office environment.

Improving the acoustic environment within the office can help achieve better concentration levels among personnel, hence leading to a more productive work force. QBISM phone booths, designed and manufactured in the UK, are the perfect combination of functionality and design to make your team more productive within an open plan office environment.

The single person, soundproof phone booths are designed for making confidential calls in a loud environment, freeing up valuable meeting rooms for their main purpose thus removing the noise distraction of telephone calls from an open plan office.

Available in a square format with a choice of upholstered, laminated or decorative manifestation panels with either black, silver or white framework. This intelligent solution enables a more open and playful approach to telephone privacy whilst affording you the quiet you crave to get the job done or make that important phone call.

System

Structure

Structural framework; Aluminium alloy, 6063-T6

Aluminium Finish options:

- Epoxy powder coated (Colours: Black, White or Aluminium)
- Rigid PVC post to post connectors (Colour: Black PVC*)
- Sprung steel panel clips
- Leveller Components

*: can customise upon request

Panel Construction:

Solid Wall Panels are 100mm thick with Clip on/off decorative panels giving an internal void of 72mm which is filled with sound absorbing 80% recycled denim acoustic blanket with a 40db rating. Electrics can be channelled from the floor or ceiling via the connecting posts or behind the removeable panels, giving continuous cable management access.

It is possible to route ducting, plumbing, pipework, electrical and data cables through panels and they can house flat screen monitors within the body of the wall panels themselves. All panels are factory built, delivered to site and simply clip together with an acoustic seal between. Graphic imagery can be positioned on the wall panels.

Aluminium connections

- 2-way 90 degree
- 3-way 90 degree
- 4-way 90 degree
- 2-way 45 degree

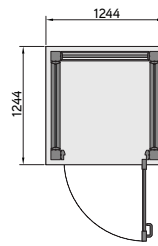

90 degree Acrylic soft corners

Ceiling Options:

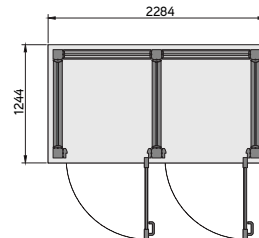

Ecophon Focus DS concealed suspended ceiling tested according to EN ISO354.

Product Range

Gentle Air Flow

Each unit is supplied with in-built air flow to gently ventilate the booth and maintain a comfortable working atmosphere. Cool air is taken from ground level outside the booth and gently circulated in the booth.
